

In the Claims

Please rewrite Claims 1 and 2 as follows:

1. (Amended) A controller which enables wireless communication between an operation member and a host, said operation member comprising:

a transmission mechanism;

an input mechanism;

a display member that displays an input portion of said input mechanism, the input portion including input items, display of one of the input portion and at least one input item being changeable, said display member being overlaid on said input mechanism; and

a control section that generates a transmission signal corresponding to said display of said display member when said input mechanism is operated.

2. (Amended) A controller according to Claim 1, wherein said input mechanism is a planar input device to which a coordinate position can be input.
